

FallSafe[™]

Guardrail System

Rooftop Guardrail systems are always preferred over fall arrest systems because they form a barrier between the user and the fall, in effect eliminating any chance for a fall to occur. This guardrail can be left installed permanently but are also simple to disassemble and transport to a different location.

The Rooftop Guardrail is designed for metal roofs including Trapezoidal and standing seam roof systems. This system can either be fastened down with self-sealing rivets to the metal sheet or with non-penetrating clamps to suit the standing seam profile.

Key Features

- The Railing is available in three configuration lengths: 1 meter, 2 meter and 3 meter.
- The Tie Rod provides additional strength to the Railing column.
- Modular System facilitates infinite configurations.
- Can be easily customized on site to suit application.
- Lightweight easy for handling and installation.
- Superior durability and weather resistance.

Applications

- Industries Shed
- Manufacturing Facilities
- Malls
- Solar Power Plants
